**Abstract of JP2003257533**

**PROBLEM TO BE SOLVED:** To surely couple a housing with another including a rear holder by locking them with the rear holder.

**SOLUTION:** A rear holder main body 2 of the rear holder 1 is provided with a plurality of locking lances 3 with elasticity for locking connecting terminals 14 each inserted into a terminal housing hole 12 of the housing. At around a center top part of the rear holder main body 2 is provided a locking arm 4 with elastic snapping property, the upper arm 6 of which is equipped with a locking claw 7. When the housing 11 is insertion-coupled with a counterpart housing 21, the housing 11 enters into the counterpart housing 21 to have the connecting terminals 14, 22 insertion-coupled with each other to be electrically connected. The locking claw 7 fitted to the locking arm 4 of the rear holder 1 gets engaged with a claw part 23 of the counterpart housing 21 to get locked.
